

C 113a – Introduction To Computing

Challenge #4: Implementation of Favicon

- By simply putting “ <link rel="icon" type="image/x-icon" href="C:/Users/USER/Downloads/wallscriptbetaicon.png"> “ on my previous work, the Favicon is now implemented.

```
C: > Users > USER > OneDrive > Documents > BSCS - Files > INTROTOCOMP > c#2-BasicXHTML_ACOSTA.html > html > head > link
1  <!DOCTYPE html>
2  <html>
3  <head>
4  <title> WALLSCRIPT | HOME </title>
5  <link rel="icon" type="image/x-icon" href="C:/Users/USER/Downloads/wallscriptbetaicon.png">
6  <style>
7  body {
8    margin: 0;
9    padding: 0;
10   background-image: url('C:/Users/USER/Downloads/WallScriptBG.jpg');
11   background-size: auto;
12   background-position: center;
13   background-repeat: no-repeat;
```

- This is the result:
